# Highlights of Consolidated Operating Performance for the Three Months Ended June 30, 2014 (1)

Consolidated ordinary revenues

Consolidated ordinary profit

(\*) Banking business revised its method of recording ordinary revenues and ordinary expenses on hedge transactions for FY14.1Q. Ordinary revenues for FY13.1Q have been retroactively adjusted to reflect the change. Consequently, consolidated ordinary revenues for FY13.1Q have been revised from ¥312.8 billion to ¥313.0 billion. As adjustments to ordinary revenues were accompanied by adjustments in the same amount to ordinary expenses, ordinary profit and net income were unaffected.

		(Billions of yen)	FY13.1Q	FY14.1Q	Ch	ange
	Life	Ordinary revenues	280.9	270.5	(10.3)	(3.7%)
	Insurance business	Ordinary profit	13.3	17.4	+4.1	+30.7%
	Non-life	Ordinary revenues	23.0	24.1	+1.0	+4.4%
	Insurance business	Ordinary profit	1.3	2.7	+1.3	+102.0%
	Banking	Ordinary revenues	9.6	9.3	(0.2)	(3.0%)

	Consolidated	Net assets	467.0	482.5	+15.5	+3.3%

\*Ordinary profit in "Intersegment adjustments" is mainly from SFH.

\*Comprehensive income (loss): FY13.1Q: (¥13.3 billion), FY14.1Q: ¥22.6 billion

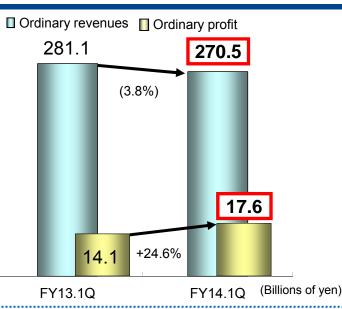

# Highlights of Consolidated Operating Performance for the Three Months Ended June 30, 2014 (2)

- Life Insurance Business: Ordinary revenues decreased compared with the same period of the previous fiscal year. Behind this drop was the fact that income from insurance premiums remained at the same level as in the same period of the preceding year, because sales of interest rate-sensitive whole life insurance rose due to temporarily strong demand led by the revision of insurance premium rates. Also contributing to the decline in ordinary revenues was the drop in investment income due to lower gains on separate accounts, net compared with the same period of the previous fiscal year, which benefited from a market recovery. Ordinary profit increased year on year, due mainly to the absence of the negative impact from the revision of the discount rate used for calculating policy reserves on the above-mentioned interest rate-sensitive whole life insurance that was present in the same period of the preceding fiscal year.
- Non-life Insurance Business: Ordinary revenues expanded year on year, owing to an increase in net premiums written primarily for mainstay automobile insurance. Ordinary profit grew year on year due to a decline in the loss ratio mainly led by a lower car accident ratio, as well as the rise in ordinary revenues.
- Banking Business: Ordinary revenues and ordinary profit decreased year on year, due to lower gains on foreign exchange transactions stemming from passive foreign currency trading by customers compared with the same period of the previous fiscal year when foreign currency exchange rates fluctuated wildly.
- Consolidated ordinary revenues decreased 3.1% compared with the same period of the previous fiscal year, to ¥303.2 billion. By business segment, ordinary revenues from the life insurance and the banking businesses decreased, whereas ordinary revenues from the non-life insurance business increased. Consolidated ordinary profit increased 29.1% year on year, to ¥21.9 billion. By business segment, ordinary profit from the life insurance and the non-life insurance businesses increased, whereas ordinary profit from the life insurance and the non-life insurance businesses increased, whereas ordinary profit from the banking business decreased. Consolidated net income was up 50.9% year on year, to ¥14.5 billion, reflecting the rise in ordinary profit, and the change of the calculation policy of the reserve for price fluctuations in the life insurance business. The change was to accumulate the reserve up to required levels from FY14 while it had accumulated the reserve in excess of the required levels until FY13.

## **Highlights of Operating Performance:** Sony Life (Non-consolidated)

- Ordinary profit decreased while ordinary profit increased year on year.
- Income from insurance premiums remained at the same level, owing to the absence of positive impact from the temporarily strong sale of interest rate-sensitive whole life insurance led by the revision of insurance premium rates despite steady growth in policy amount in force.
- Investment income decreased due to lower gains on separate accounts, net compared with the same period of the previous fiscal year, which benefited from a market recovery.
- Ordinary profit increased year on year, due mainly to the absence of the negative impact from the revision of the discount rate used for calculating policy reserves on the above-mentioned interest rate-sensitive whole life insurance that was present in the same period of the preceding fiscal year.
- Net income was up year on year reflecting the rise in ordinary profit, and the change of the calculation policy of the reserve for price fluctuations. The change was to accumulate the reserve up to required levels from FY14 while it had accumulated the reserve in excess of the required levels until FY13.

#### <Reasons for changes>

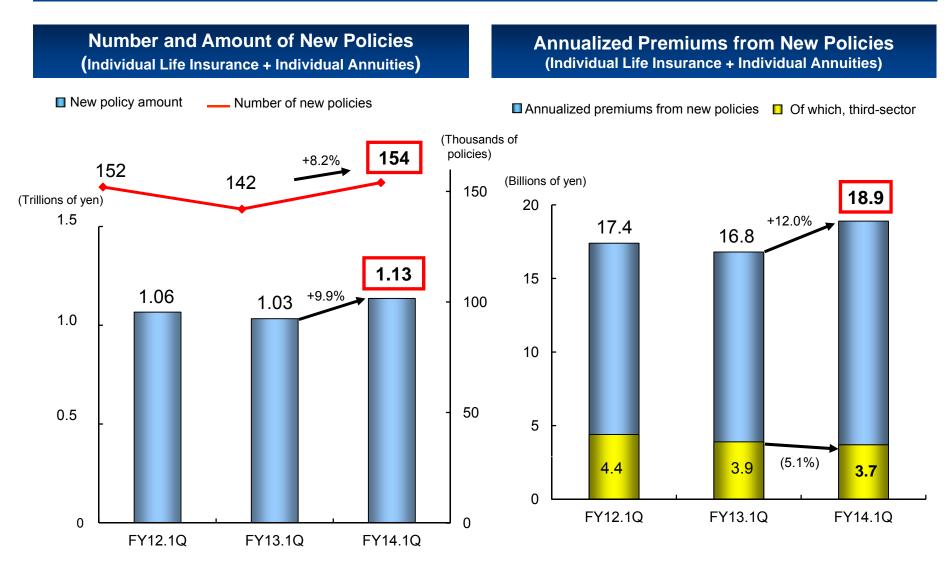

- Increased due to higher sales of U.S. dollar denominated insurance, variable life insurance and term-life insurance.
- Lapse and surrender rate decreased in each product.
- Increased due to higher sales of termlife insurance, endowment insurance, U.S. dollar denominated insurance, variable life insurance and educational endowment insurance.
- Increased year on year, due mainly to the absence of the negative impact from the revision of the discount rate used for calculating policy reserves on interest rate-sensitive whole life insurance that was present in the same period of the preceding fiscal year.

Notes:

- 1. Figures for new policy amount, lapse and surrender amount, lapse and surrender rate, policy amount in force, annualized premiums from new policies and annualized premiums from insurance in force are calculated as the total of individual life insurance and individual annuities.
- 2. The lapse and surrender rate shows the ratio derived by dividing the amount of lapses and surrenders, not adjusted for policy amount decreases, increases, and reinstatements, by the policy amount in force at the beginning of the fiscal year

## Overview of Operating Performance: Sony Bank (Non-consolidated) (2)

#### <Reference> On Managerial Accounting Basis FY13.1Q FY14.1Q Change (Billions of yen) (0.6)(10.6%) Gross operating profit 5.9 5.2 Net interest income<sup>\*1</sup> (1) 4.5 4.4 (0.0)(2.1%)Net fees and commissions<sup>\*2</sup> (2) 0.4 (0.0)(0.5)(119.5%)Net other operating income<sup>\*3</sup> 0.8 0.8 (0.0)(1.4%)Gross operating profit (core profit) (12.2%)5.0 4.4 (0.6)(A) = (1) + (2)Operating expenses and other 3.5 3.6 +0.0 +1.1% 3 expenses Net operating profit (core profit) (45.0%) 0.7 1.4 (0.6) =(A)-(3)

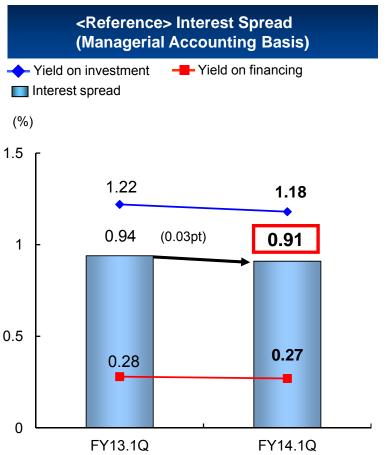

#### ■Managerial accounting basis

The following adjustments are made to the figures on a financial account for profits and losses more appropriately.

- \*1: Net interest income: Includes profits and losses associated with fund investment recorded in net other operating income, including gains or losses from currency swap transactions.
- \*2: Net fees and commissions: Includes profits and losses for customer dealings in foreign currency transactions recorded in net other operating income.
- \*3: Net other operating income: After the above adjustments (\*1 and \*2), consists of profits and losses for bond and derivative dealing transactions.

#### Core profit

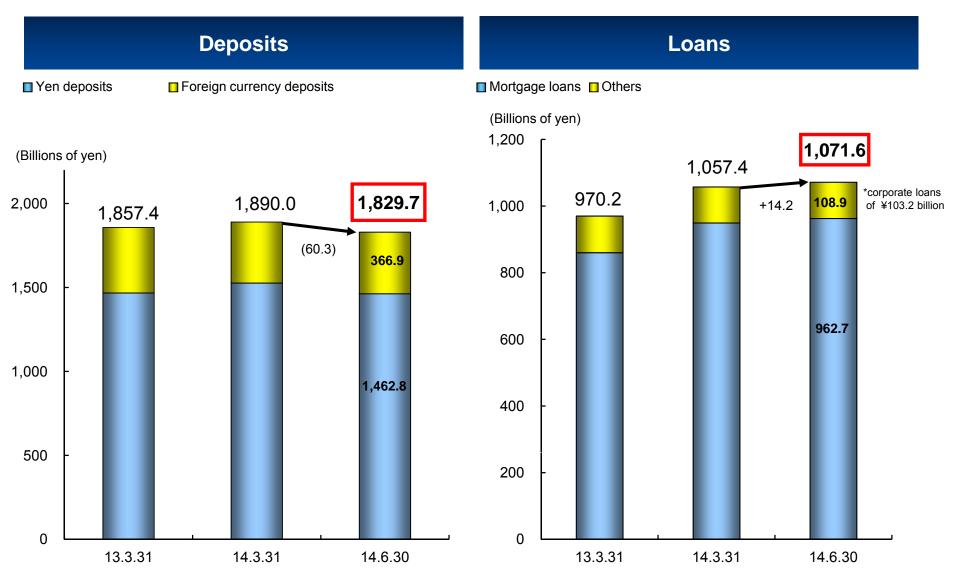

Profits and losses exclude net other operating income, which includes those on bond and derivative dealing transactions, and stands for Sony Bank's basic profits.

Note: Interest spread=(Yield on investment)-(Yield on financing)

## **Operating Performance: Sony Bank (Non-consolidated) (1)**

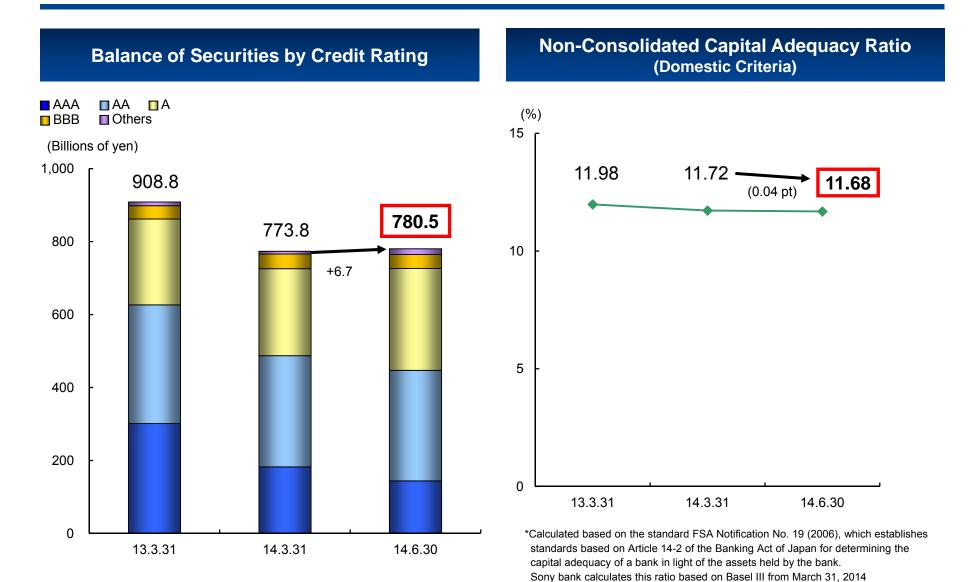

Line item amounts are truncated below ¥100 million.

## **Operating Performance: Sony Bank (Non-consolidated) (2)**

Line item amounts are truncated below ¥100 million.

## **Consolidated Financial Forecast** for the Year Ending March 31, 2015

## **Consolidated Financial Forecast** for the Year Ending March 31, 2015

#### Consolidated Financial Forecast for the Year Ending March 31, 2015 is unchanged from the forecast announced on May 14, 2014

(Billions of yen)	FY2013 (Actual)	FY2014 (Forecast)	Change
Consolidated ordinary revenues	1,320.4*	1,191.0	(9.8%)
Life insurance business	1,196.6	1,061.9	(11.3%)
<u>Non-life insurance business</u> <u>Banking business</u>	89.8 36.4*	92.4 36.6	+2.8% +0.3%
Consolidated ordinary profit	76.1	77.0	+1.1%
Life insurance business Non-life insurance business Banking business	67.2 3.0 5.6	67.4 3.9 5.3	+0.2% +29.8% (6.0%)
Consolidated net income	40.5	49.0	+21.0%

#### <Segment information for ordinary revenues and ordinary profit>

#### Life Insurance Business

Ordinary revenues are expected to decrease because we do not expect such increases in lump-sum payment insurance premiums and investment income on separate account due to market recovery as recorded in FY13. However, we expect steady growth in policy amount in force. Ordinary profit is expected to be nearly at the same level as in FY13. This is because we expect a higher provision for policy reserves related to minimum guarantees for variable life insurance policies, as well as an increase in operating expenses due to the consumption tax rate rise. We do not expect any negative impact from a rise in provision of policy reserves resulting from the revision of the discount rate used for calculating policy reserves in FY13.

#### Non-life Insurance Business

Ordinary revenues are expected to increase in line with growth in net premiums written, primarily for mainstay automobile insurance. Ordinary profit is expected to increase from FY13. We do not revise upward ordinary profit although the loss ratio for FY14.1Q was lower than we had expected. This is because we expect some negative effects from a fluctuating car accident ratio and natural disasters which might increase provision of reserve for outstanding losses. We also expect operating expenses to possibly increase from FY14.2Q onward.

#### Banking Business

Ordinary revenues are expected to be stable, because we anticipate stable business growth even in persistently low interest rates. Ordinary profit is expected to decrease because we do not believe that foreign exchange transactions will be as vigorous as FY13, and we expect higher operating expenses due to our initiatives designed to strengthen our settlement function for future growth. However, we expect gross operating profit to stably increase.

#### <Consolidated net income>

Net income is expected to grow significantly year on year. This is because Sony Life changed its calculation policy of the reserve for price fluctuations to accumulate the reserve up to required levels from FY14 while it had accumulated the reserve in excess of the required levels until FY13.

(\*) Since the banking business revised its method of recording ordinary revenues and ordinary expenses on hedge transactions for FY14.1Q, ordinary revenues for FY13 have been retroactively adjusted to reflect the change. Consequently, consolidated ordinary revenues and ordinary revenues of the banking business for FY13 have been revised.

## Sony Life's MCEV and Risk Amount Based on Economic Value as of June 30, 2014

Please keep in mind that the validity of these calculations of MCEV as of June 30, 2014, has not been verified by outside specialists. A part of the calculations of MCEV as of June 30, 2014, adopted simplified method.

## Sony Life's MCEV as of June 30, 2014

	(Billions of yen)	14.3.31	14.6.30	Change from 14.3.31
МС	EV	1,221.3	1,260.0	+38.7
	Adjusted net worth	722.1	758.4	+36.2
	Value of existing business	499.1	501.7	+2.5
		14.3.31	14.6.30	
Nev	v business value (Billions of yen)	55.2 (12M)	16.9 (3M)	
Nev	w business margin	5.2%	5.5%	

Notes:

1. New business margin equals new business value divided by present value of premium income.

2. Calculated MCEV as of June 30, 2014 by using updated economic assumptions and lapse and surrender rate as of March 31, 2014.

#### Reasons for changes in MCEV

•MCEV as of June 30, 2014, increased ¥38.7 billion from March 31, 2014, due mainly to an acquisition of new policies and yield curve changes in Japanese yen. (lowering interest rates under 40 years)

#### New business value and new business margin

•New business value as of June 30, 2014 was ¥16.9 billion, (¥67.6 billion / annualized) reflecting brisk sales of new policies.

•New business margin as of June 30, 2014, was up 0.3% from March 31, 2014, due mainly to the absence of the FY13 negative impact of a substantial increase in sale of lump-sum payment endowment insurance and the strong sale led by the revision of insurance premium rates on interest rate-sensitive whole life insurance.

\*Please see page 43 for trend on JGB yields.

# Sony Life's Risk Amount Based on Economic Value as of June 30, 2014

(Billions of yen)	14.3.31	14.6.30
Insurance risk	654.5	663.9
Market-related risk	240.0	265.0
Of which, interest rate risk*	180.9	202.8
Operational risk	26.3	26.1
Counter party risk	1.3	1.7
Variance effect	(257.8)	(269.3)
The risk amount based on economic value	664.3	687.3
(*) Interest amount excluding the variance effect within market-re	lated risk.	
(Billions of yen)	14.3.31	14.6.30
MCEV	1,221.3	1,260.0

#### Maintained capital adequacy by controlling market-related risk.

Notes:

- 1. The risk amount based on economic value refers to the total amount of Sony Life's risks, comprehensively examined and including insurance risk and market-related risk.
- 2. The solvency risk capital on an economic value basis is calibrated at VaR (99.5) over one year and based on the internal model, which is a similar but modified model based on the EU Solvency II (QIS5) standard method.
- 3. Calculated MCEV as of June 30, 2014 by using updated economic assumptions and lapse and surrender rate as of March 31, 2014.

## Method of Measuring Risk Amount Based on Economic Value (1)

#### Market-related Risk\*1

	Sony Life	(Reference) EU Solvency II (QIS5)
Interest rate risk Fluctuations in net asset value based on economic value in response to the shocks in the right columns. The same applies below.	Percentage increases or decreases differ for each currency and term. As for measuring interest rate risk in Japanese yen, introduced principal component analysis, where yield curve changes are disaggregated into three components, parallel shift, twist and butterfly, and the yield curve is shocked by each component. (Example) For Yen 30-year, 34% decrease (parallel shift), 28% decrease (twist), 7% decrease (butterfly))	Percentage increases or decreases differ for each currency and term but <u>no lower than 1%</u> (Example) For Yen 30-year, 30% decrease
Equity risk	Listed equities 45%, Other securities 70%	Global 30%, Others 40% *2
Real estate risk	Actual real estate 25%	Real estate 25%
Credit risk	Credit risk = (market value) x (risk coefficient for each credit rating) x duration Note that durations have caps and floors, depending on credit ratings. (Example) Rating A: Risk coefficient (1.4%), cap (23), floor (1)	Same as on the left
Currency risk	30% downside fluctuation	25% downside fluctuation

#### Notes

1. Principal items as of June 30, 2014.

2. Standard risk coefficients are global: 39%/other: 49%. Symmetric adjustment (an adjustment of±10% of the average value of the stock price index during a defined period in the past) is applied; as of the QIS5 trial introduction (December 31, 2009), these were 30%/40%.

## Method of Measuring Risk Amount Based on Economic Value (2)

#### Insurance Risk\*1

	Sony Life	(Reference) EU Solvency II (QIS5)		
Mortality risk	Mortality rate increases by 15% for each year elapsed	Same as on the left		
Longevity risk	Mortality rate decreases by 20% for each year elapsed	Same as on the left		
Lapse risk	The largest amount of these; *2	The largest amount of these;		
	<ul> <li>Lapse rate increases by 50% for each year elapsed</li> <li>Lapse rate decreases by 50% for each year elapsed</li> <li>30% of policies on which surrender value is in excess of best estimate liability are immediately surrendered</li> </ul>	<ul> <li>Increases by 50% in the assumed rates of lapsation for Life module, 20% for Health module</li> <li>Decreases by 50% in the assumed rates of lapsation for Life module, 20% for Health module</li> <li>30% of policies (70% for group annuities, etc.) on which surrender value is in excess of best estimate liability are immediately surrendered</li> </ul>		
Expense risk	Operating expenses increase by 10% for each year elapsed Rate of inflation rises by 1%	Same as on the left		
Disability risk	Rate of occurrence increases by 35% in the first fiscal year, rising by 25% for each year thereafter	Rate of occurrence increases by 35% in the first fiscal year, rising by 25% for each year thereafter. Recovery rate decreases by 20%.		

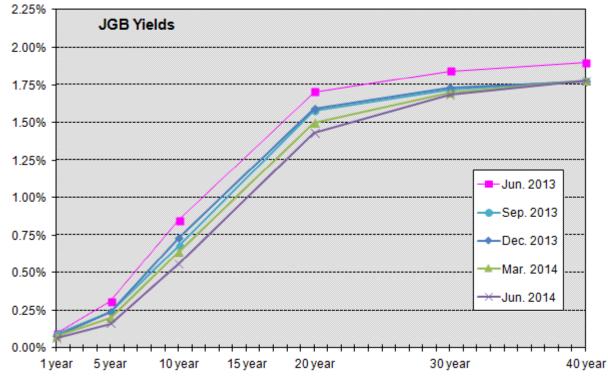

Notes

1. Principal items as of June 30, 2014.

2. At Sony Life, lapse risk is calculated by computing and adding together the largest amount of three options for each insurance policy
