* The Conference Call for explaining the Sony Financial Group financial results will be held at 16:00 (Tokyo), August 10, 2016.

We are sorry for any inconvenience that our Conference Call will be held only in Japanese.

We will upload the presentation materials with speech text on August 10, 2016 after 15:00, and its Q&A summary at a later date on Earnings Releases and Presentation Materials page on our website:

http://www.sonyfh.co.jp/en/financial_info/results/index.html

* On August 10, 2016, SFH's significant subsidiaries: Sony Life Insurance Co., Ltd. (Sony Life), Sony Assurance Inc. (Sony Assurance) and Sony Bank Inc. (Sony Bank) will announce their financial results for the three months ended June 30, 2016. SFH prepared an English-language summary of those Japanese announcements made by the above subsidiaries, solely for convenience of non-Japanese readers.

I. Notes Regarding Summary Information

1. Changes in significant subsidiaries during the period under review (changes in specified subsidiaries Accompanying Changes in scope of consolidation)

None.

Although not specified subsidiaries, Sony Lifecare Inc., a holding company that oversees the Sony Financial Group's operations in the nursing care business, and nursing-care provider Lifecare Design Inc., which were non-consolidated subsidiaries in the previous consolidated fiscal year, have been included in the scope of consolidation, due to a rise in their importance from the first quarter of the fiscal year ending March 31, 2017. The results of both companies are included in the "other" category in the consolidated statements of income.

2. Changes in accounting policies, accounting estimates and restatements of the Consolidated Financial Statements

Changes in accounting policies

(Application of the "Revised Implementation Guidance on Recoverability of Deferred Tax Assets" (ASBJ Guidance No.26, March 28, 2016)(hereinafter, the "Recoverability Implementation Guidance"))

The Sony Financial Group has applied the Recoverability Implementation Guidance from the first quarter of the fiscal year ending March 31, 2017 and partially revised the accounting method of recoverability of deferred tax assets.

The Recoverability Implementation Guidance has been applied in accordance with the transitional treatment set forth in Article 49(4) of the Recoverability Implementation Guidance. The differences between (i) the amounts of deferred tax assets and deferred tax liabilities when provisions applicable from ① to ③ of Article 49(3) of the Recoverability Implementation Guidance were applied as of April 1, 2016, and (ii) the amounts of deferred tax assets and deferred tax liabilities at the end of the fiscal year ended March 31, 2016, were added to retained earnings as of April 1, 2016.

As a result, deferred tax assets increased ¥48 million and retained earnings rose ¥105 million, while deferred tax liabilities decreased ¥56 million as of April 1, 2016.

Highlights of Consolidated Operating Performance for FY16.1Q (2)

- **Life Insurance Business:** Policy amount in force increased steadily during FY16.1Q. However, ordinary revenues decreased compared with FY15.1Q due to a decrease in insurance premium revenues led by a decline in sales of single premium products and a deterioration in investment performance in the separate account reflecting the worsened financial market conditions. Ordinary profit increased year on year due to a significant decline in provision of policy reserves for minimum guarantees for variable life insurance owing to a lower acquisition of new policies and a decrease in insurance claim payments.
- **Non-life Insurance Business:** Ordinary revenues and ordinary profit expanded year on year, owing to an increase in net premiums written primarily for mainstay automobile insurance and an increase in gains on sale of securities.
- **Banking Business:** Ordinary revenues were essentially flat year on year. Interest income on loans increased in line with a favorably growing balance of mortgage loans, whereas interest income and dividends on securities decreased. Ordinary profit decreased significantly year on year, due to an increase in operating expenses, mainly in advertising expenses for card loan business.
- Consolidated ordinary revenues decreased 8.6% year on year, to ¥326.6 billion. Ordinary revenues from the life insurance business decreased, while ordinary revenues from the non-life insurance business increased. Ordinary revenues from the banking business were essentially flat year on year. Consolidated ordinary profit increased 34.6% year on year, to ¥25.5 billion. By business segment, ordinary profit from the life insurance and the non-life insurance businesses increased, whereas ordinary profit from the banking business decreased. Profit attributable to owners of the parent was up 37.6% year on year, to ¥17.6 billion due to the increase in ordinary profit.

■ Ordinary revenues ■ Ordinary profit

- ◆ Ordinary revenues decreased but ordinary profit increased year on year.
- ◆ Income from insurance premiums decreased due to a decline in sales of single premium products.
- ◆ Investment income decreased due to a deterioration in investment performance in the separate account reflecting the worsened financial market conditions.
- ◆ Ordinary profit increased due to a significant decline in provision of policy reserves for minimum guarantees for variable life insurance owing to a lower acquisition of new policies and a decrease in insurance claim payments.

<Reasons for changes>

◆ Decreased due to lower sales of variable life insurance despite higher sales of U.S. dollar-denominated insurance.

◆ Decreased due to lower sales of variable life insurance and educational endowment insurance despite favorable sales of term life insurance and U.S. dollar-denominated insurance.

◆ Core profit rose year on year due to an decrease in insurance claim payments, despite a fall in the positive spread and an increase in the provision of policy reserves for minimum guarantees for variable life insurance due to a worsening market. In ordinary profit, however, the negative impact on profit of policy reserves for minimum guarantees associated with this worsening market was offset by hedge gains, which are included in capital gains and losses.

Notes:

- Figures for new policy amount, lapse and surrender amount, lapse and surrender rate, policy amount in force, annualized premiums from new policies and annualized premiums from insurance in force are calculated as the total of individual life insurance and individual annuities.
- The lapse and surrender rate shows the ratio derived by dividing the amount of lapses and surrenders, not adjusted for policy amount decreases, increases, and reinstatements, by the policy amount in force at the beginning of the fiscal year.

 ■ Consolidated ordinary profit

<Consolidated>

◆ Ordinary revenues were essentially flat year on year. Interest income on loans increased in line with a favorably growing balance of mortgage loans, whereas interest income and dividends on securities decreased. Ordinary profit decreased significantly year on year, due to an increase in operating expenses, mainly in advertising expenses for card loan business.

<Non-consolidated>

◆ Both gross operating profit and net operating profit decreased year on year.
 • Net interest income increased due to an increase in interest income on loans, although interest income and dividends on securities decreased.
 • Net fees and commissions decreased due mainly to higher fees on guarantee commission.
 • Net other operating income decreased due to lower gains on foreign exchange transactions.

The following adjustments are made to the figures on a financial account for profits and losses more appropriately.

*1: Net interest income: Includes profits and losses associated with fund investment recorded in net other operating income, including gains or losses from currency swap transactions.

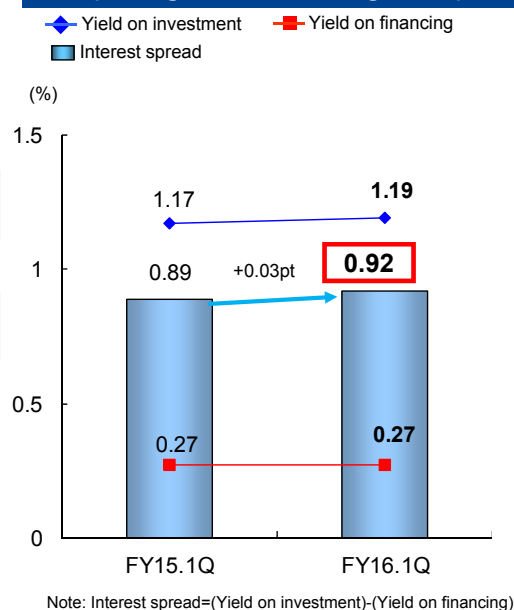

*2: Net fees and commissions: Includes profits and losses for customer dealings in foreign currency transactions recorded in net other operating income.

*3: Net other operating income: After the above adjustments (*1 and *2), mainly consists of profits and losses for bond and derivative dealing transactions.

■ Core profit

Profits and losses exclude net other operating income, which includes those on bond and derivative dealing transactions, and stands for Sony Bank's basic profits.

<Segment information for ordinary revenues and ordinary profit>

■ Life insurance business

In FY16.1Q, ordinary revenues were below our initial expectations because of a decline in insurance premium revenues, but ordinary profit exceeded our initial expectations. This situation was due to valuation gains on hedges on securities, lower insurance claim payments and a decrease in the provision of policy reserves for minimum guarantees for variable life insurance owing to the acquisition of new policies.

We maintain our forecast for the full year, taking into consideration such factors as the market environment from the second quarter onward and trends in insurance claim payments.

■ Non-life insurance business

Ordinary revenues were essentially in line with our expectations in FY16.1Q. Ordinary profit outpaced our initial expectations, due to factors including higher gains on sale of securities. We maintain our forecast for the full year.

■ Banking business

The introduction of negative interest rates affected earnings in FY16.1Q. Also, we incurred up-front investment expenses to enact measures aimed at expanding the customer base over the medium term. Taking into account our progress on this front, performance was essentially in line with expectations, and we maintain our forecast for the full year.

Sony Life's MCEV and ESR as of June 30, 2016

Please keep in mind that the validity of these calculations of MCEV as of March 31, 2016 (after restated) and as of June 30, 2016 has not been verified by outside specialists. A part of the calculations of MCEV as of June 30, 2016 adopted simplified method.

*In this part, figures, ratios and percentages changes have been rounded.

Sony Life Adopts UFR for MCEV and ESR

Taking the points described below into consideration, from FY16, Sony Life has changed to the method of using ultimate forward rates (UFR) as its extrapolation method for ultralong-term interest rates to obtain the risk-free rate used in calculating MCEV and ESR.

- ◆When evaluating ESR, which indicates capital sufficiency, we consider it appropriate to reflect the status of deliberations on international capital regulations. However, as no evaluation method is established at present, taking market consistency into account we have set the start of extrapolation beyond the 40th year.
- ◆We judge it desirable at present to maintain consistency with MCEV and ESR, an important indicator for the company. We have taken into consideration the compliance with MCEV Principles (ensuring consistency in asset and liability valuations by using reliable market data to determine interest rates up to the 40th year) and such factors as the disclosure status of European and Japanese life insurers.

Note: For interest rates up to the 40th year, we use rates on Japanese government bonds, which can be obtained in the market. For interest rates beyond the 40th year, we employ the Smith-Wilson method (in the past we conducted extrapolation using a fixed 40th-year forward rate) for extrapolation so that the 60-year forward rate will converge on the UFR (3.5%). As a result, whereas the 40-year interest rate as of March 31, 2016, is 0.63%, based on market data, and 60- and 80-year rates are 1.23% and 1.47%, for which market data is not available. Please refer to the appendix page 51 for details.

In line with this change, we disclose revalued key indicators as of March 31, 2016.

(Billions of yen)	16.3.31	16.6.30	Change
MCEV	1,330.1	1,076.4	(253.7)
Adjusted net worth	2,074.4	2,671.8	597.4
Value of existing business	(744.4)	(1,595.5)	(851.1)
(Billions of yen)	FY15.4Q (3M)	FY16.1Q (3M)	
New business value	3.9	(0.2)	
New business margin	1.2%	(0.0%)	

Notes:

- Calculated MCEV as of June 30, 2016 by using updated economic assumptions and lapse and surrender rate from March 31, 2016.
- New business value for FY16.1Q is calculated accumulating new business value for each month based on economic assumptions at the end of each month.
New business value for FY15.4Q is calculated accumulating new business value for each quarter based on economic assumptions at the end of each quarter.

◆ Reasons for changes in MCEV

- MCEV as of June 30, 2016 decreased ¥253.7 billion from March 31, 2016 due to a significant decline in interest rates in Japanese yen.

◆ New business value / new business margin

- From FY16, Sony Life has changed to the calculation method of new business value and new business margin. The method has been changed to one of accumulating new business value from at the end of each quarter to the end of each month.
- For FY16.1Q(3M), the new business value was negative ¥0.2 billion, and the new business margin was negative 0.0%, down 1.2pt from FY15.4Q(3M).

ESR	141%	95%

Notes:

1. The risk amount based on economic value refers to the total amount of Sony Life's risks comprehensively examined by a market consistent approach, including insurance risk and market-related risk.
2. The solvency risk capital on an economic value basis is calibrated at VaR (99.5) over one year and based on the internal model, which is a similar but modified model based on the EU Solvency II standard method.
3. ESR=MCEV + Frictional costs / Risk amount based on economic value.

Responses to an Environment of Ultralow Interest Rates and Our Perspective on Soundness

<Responses to an Environment of Ultralow Interest Rates>

- **Product and sales strategies:**
 - We discontinued sales of some saving-type products in May 2016.
 - In October 2016, we plan to revise insurance premium rates on such products as variable life insurance (whole life type), limited payment whole life insurance, living benefit whole life insurance (living standard type) and living benefit insurance (whole life type), and discontinue sales of interest rate-sensitive whole life insurance.
 - We will reinforce our ability to offer U.S. dollar-denominated insurance and term life insurance.
- **Asset management policy:**
 - Based on an ALM perspective, we will continue to invest in assets that match our liability characteristics, while at the same time working to diversify our investment methods.
 - We will expand our investment in ultralong-term FILP bonds and corporate bonds.
 - Although continuing to invest in ultralong-term bonds, we will not invest in products with negative interest rates.

<Our Perspective on Soundness>

- ESR fell below 100% as of June 30, 2016, but the figure had recovered to around 110%* as of July 31, 2016. As described above, we are working to revise our products and reinforce our sales capabilities. We believe that current ESR levels will recover due to the accumulation of new business value from the second half of FY16. Accordingly, at present we do not believe an increase in capital is necessary.

*ESR as of July 31, 2016 is calculated by using updated interest rates as of June 30, 2016, based on ESR as of June 30, 2016.

Method of Measuring Risk Amount Based on Economic Value (1)

■ Market-related Risk¹

	Sony Life	(Reference) EU Solvency II Implementing Measures (Delegated Regulation)
Interest rate risk Fluctuations in net asset value based on economic value in response to the shocks in the right columns. The same applies below.	Percentage increases or decreases differ for each currency and term. As for measuring interest rate risk in Japanese yen, introduced principal component analysis, where yield curve changes are disaggregated into three components, parallel shift, twist and butterfly, and the yield curve is shocked by each component. (Example) For Yen 30-year, 33% decrease (parallel shift), 28% decrease (twist), 8% decrease (butterfly)	Different percentage changes in interest rates are set for each term, from one year to 20 years. For terms longer than 20 years and through 90 years, percentage changes are set using linear interpolation, with negative 29% as the percentage change for 20 years and negative 20% as the percentage change for 90 years.
Equity risk	Listed equities 45%, Other securities 70%	Global 39%, Others 49% ^{*2}
Real estate risk	Actual real estate 25%	Same as on the left
Credit risk	Credit risk = (market value) x (risk coefficient for each credit rating) x duration Note that durations have caps and floors, depending on credit ratings. (Example) Rating A: Risk coefficient (1.4%), cap (23), floor (1)	Credit risk = (market value) x (risk coefficient for each credit rating and duration) (Example) Rating A: Duration (Dur): 5-10 years Risk coefficient=7.0% + 0.7% x (Dur - 5)
Currency risk	35% downside fluctuation	25% downside fluctuation
